

Remote Backup Service

Your Data Protection Answer!

Have any of the following disasters ever happened to you?

- ☛ Lost precious data through a hard drive crash or user error?
- ☛ Had a fire or flood?
- ☛ Theft of your computer?
- ☛ Deleted the wrong files?
- ☛ Corrupted backups?
- ☛ Lost or damaged laptop?
- ☛ VIRUS destroyed all of your data?
- ☛ Person responsible for doing backup was on vacation?
- ☛ Computer damaged via lightning, surge or power outage?

If you answered yes to any of these questions or think that it could happen to you, then Mid-City Office Systems, Inc **Remote Backup Service** may be your solution.

Let's face it, backups seem unimportant, that is until you need the data from your storage media. Data recovery can be a costly affair for any business. Fees to recover lost data range anywhere from a few hundred dollars and can go into the thousands. Re-inputting of data is even more costly. For example, if you pay someone \$7.50 per hour for a month to re-enter lost data, that's \$1200!! And with that not all of your history is restored.

Mid-City Office Systems Inc. **Remote Backup Service** provides safe, reliable backups that are stored off premises. The process is really quite simple: Your computer calls our storage computer via internet and transfers your data in a compressed and encrypted file. This provides a full 365 days of incremental backups. On any given day in any business, tasks tend to get priority in order of immediate importance. There seems to be too many things to do and not enough time to do them. That is a fact of life in running a business. Backups tend to end up somewhere at the end of the list.

For as little as \$30.00* per month you can rest easy knowing your backups are safely stored off site! Please call us today so we can get you started!
